

## PART 2

1. Briefly describe your overall impressions of the Summer Immersion program. (What specific activities/events of the Institute had the most impact on you? What was the most valuable experience (s)? What challenges or concerns were presented?)

Comments: Overall, I felt like this summer program was a good experience. Learning about genetic engineering made me realize the reason why scientists do those kind of experiments. Making the glow in the dark E. coli was my favorite experiment. I had some challenges due to me not being able to really know a lot of what we were talking about b/c I didn't take AP Bio. Even though that was challenging at the end I was able to catch up w/ everyone.
