

SECTION E

1. What benefit(s) did you gain from your participation in the Summer Immersion Science program as it relates to your classroom instructional knowledge and skills?

I now know how to ~~to~~ conduct protch labs in my classroom. I was given enough context to adapt these techniques to solve & pose problems for my students that are related to the standards & issues related to AP Env. Science & Faensic Science.

In addition, I had an opportunity to work closely with other high school teachers & incoming freshman. This allowed me to better understand how my students might react to these issues & questions.

Finally, I am excited to have an contact at Howard who is interested in working with students & teachers so that science opportunities that will inspire HS school students to study science are available.
