

## PART 2

1. Briefly describe your overall impressions of the Summer Immersion program. (What specific activities/events of the Institute had the most impact on you? What was the most valuable experience (s)? What challenges or concerns were presented?)

Comments:

I liked how the information was presented. The overall concept was taking YFG from one plant and putting into another. Dr. Ullah did an excellent job explaining each step of the process. I also loved the labs. Basar, one of the TAs was very good at explaining whenever there was a question. My favorite experience was using the gene gun.
