

## PART 2

1. Briefly describe your overall impressions of the Summer Immersion program. (What specific activities/events of the Institute had the most impact on you? What was the most valuable experience (s)? What challenges or concerns were presented?)

Comments:

1. I enjoyed the hands on experience w/ lab techniques
2. The lectures allowed me to observe areas that were difficult for participating students & contemplate areas that I need to focus on w/ my seniors to better prepare them for college lecture.
3. The course itself was a little long. 4 weeks of the summer at 5 days/wk meant I could not participate in prof. development at my school.
