

Soooo,

Upon seeing the e-mail from Dr. U I thought to myself “ugh another school thing” but to my surprise I was waaaay off. I think that being in this program is the best thing since sliced bread.

Being in this program is something that I would recommend to everyone and anyone possible. Not only did I learn about things that changed my perspective on how I live and what I take for granted but it helped me realize what I wanted to do with the rest of my life. Being with and around such enthusiastic instructors, who are passionate about what they teach and can inspire others to open their eyes to it is a beautiful thing.

I met 13 of the most intellectually and diverse minds in my generation. To see other people in my age group doing something productive with their life is refreshing .

My favorite part of the program would have to be seeing Dr. Ullah's face each morning excited to feed us more information and his patience when it didn't digest well. Dr. Caren Cheng's presentation would have to be of ,all the guests, my favorite.

All in all I would only change one thing in the program ... The length . I would love to have more time !!!!! Sincerely someone who has DNA---> RNA---> Protein permanently inscribed in their brain.

- Thank You
